## New android version name 9. 0

Android phones and tablets are not all kept up to date with the current version of Android. It is often useful to know which android version a specific phone or tablet is running so you can get help with something or determine if a feature is present. The android version itself is not the only information you may want to find. The device name, manufacturer, and carrier also affect your device's software. Even the Linux kernel version and the new android security patch level are important. How to find your Android version number and security patch level This information is available on the settings screen throughout the Android system. Whatever version of Android you are using and any customizations that the version of your Android device has, you should be able to get to it in the same way. Open the app drawer —the entire list of apps installed on your phone. It is almost always a button at the bottom of the home screen in the center. Scroll through the list of installed apps and look for an app called Settings. Tap the Settings icon to sign in to the Android system settings app. Scroll down on the Settings screen and look for an About Phone, About Tablet, or System option. You will usually find this at the bottom of the main settings screen in System, but depending on your phone it may be different. If you find a system-specific option, you can usually find about phone underneath it. You couldn't find him? Depending on your phone, here are some places you can find the Android version: Samsung Galaxy Phones: About Phone &gt; Android Stock Software Information: System -&gt; About Phone or About Tablet On the resulting screen, look for Android version to find the android version installed on your device, so: It only displays the version number, not the code name — for example. , says Android 6.0 instead of Android 6.0 Marshmallow. You'll have to perform a web search or search for a list of Android codenames if you want to know the code name associated with the version. Here is a current list: Android 11 Android 10 Android 9 Android 8.0 – 8.1: Oreo Android 7.0: Nougat Android 6.0: Marshmallow Android 5.0 – 5.1.1: Lollipop Android 4.4 – 4.4.4: Kit Kat Android 4.1 – 4.3.1: Jelly: Jelly: Jelly: Jelly: Jelly: Jelly: Jelly: Jelly: Jelly: Jelly: Jelly: Jelly: Jelly Bean Android 4.0 – 4.0.4: Android Ice Cream Sandwich 3.0 – 3.2.6: Honeycomb Android 2.3 – 2.3.7 : Gingerbread Android 2.2 – 2.2.3: Froyo Android 2.0 – 2.1: Eclair Android 1.6: Donut Android 1.5 : Cupcake Other fields here are also relevant. The Model number field says the name of your device, for example. RELATED: Google's best hidden games and Easter Eggs Build number and Kernel version give information about the android on your device and its Linux kernel version and build date. Traditionally, this information has been useful in determining whether your device has the latest security patches. On Android 6.0, Google has added an Android patch security level field here that says your device last received security patches. (As a bonus, you can repeatedly tap the Android version field here to access a different Easter egg on various versions of Android. On Android 5.0 Lollipop and Marshmallow 6.0, for example, it's a hidden game in flappy bird style.) The exact version of Android you are using is not the only important information. If you want help for a specific device, your manufacturer is also important —for example, Samsung's Android version includes the TouchWiz interface, many Samsung apps, and extensive interface modifications by Samsung. Microsoft doesn't allow CD manufacturers to change the way the Windows Start menu, taskbar, and Control Panel work, but Google allows Android device manufacturers to run wild and change almost anything they want. Different devices from the same manufacturer will also have different customizations, so knowing the exact device you're using —just like your manufacturer—is crucial when trying to get information or even custom ROMs for a specific device online. Last updated january 2, 2020 You are a busy person. Despite having the ability to install dozens of applications, you just want to install the best. The problem is you're not sure what's best. There are many articles online referencing the same applications. And when you install some of them, you find yourself messing up your phone with apps you don't use. The solution? Install only the apps that will help you become more productive? The truth is that no single app will help you become productive. You need to build the right mindset and become laser focused with your goals. So the real solution is to start building a productive mindset. In this article, I will not only look at the Android productivity apps you need, but some extra advice on how to be productive. Here is a list I've compiled from some of the best apps to help you become a productivity machine. 1. Five-minute diary What is the best way to start your mornings or end your nights than to scribble your thoughts? Backed by research, the diary helps you live a happy and productive lifestyle. Express gratitude and set daily goals with this app. Summary of features: Track important objectives Practice gratitude Attach images to the daily timeline Cost: \$5!Install Five Minute Journal here! 2. Voice recorderStop letting important thoughts pass. Record important meetings or memos using your built-in microphone with voice recorder. Once finished, you can play all your recordings within this app. Feature Summary: Share Simple-to-Use Cost: FREEInstall Voice Recorder interface here! So stick with the above apps that feed you productivity! Bonus Tip: Create productive habits to make these apps work for you But in addition to using the above apps, start creating productive habits that I'll reveal to you. 1. Turn your mornings into being productive Start your mornings with productivity. Here's what I mean, wake up an hour early every morning to organize your day before you get distracted. The problem is that if you start your mornings unintentionally you will do just what is thrown at you. For example, you will complete your assigned tasks at work and feel that you have had a productive day. But was it productive? If you're not getting close to your most important goals every day, then you haven't done much. That's why morning rituals are the most important part of your day. There's a reason why successful people like Tim Ferris, Tony Robbins and Oprah have morning rituals. Because they work. Morning rituals prepare your mind for success by establishing intentions Your morning ritual consists of many habits. But the most important are diaries and meditations. Meditating will clear your mind of all mental distractions. And once your mind is clear, you can start setting your daily goals. 2. Increase your chances of success by setting goals Setting goals is an art. Put the bar too high and you you never complete anything. But, set the low bar and you will only complete mediocre tasks. So what is the best way to set goals? Using a journal to write S.M.A.R.T goals you want to do every day. Research has shown that people who set clear goals are more likely to succeed than those who don't. So how do you know what goals to set? Start by asking yourself the following questions: Am I happy with my current job? What do I want to learn next? Am I satisfied with my financial situation? Your goal should be meaningful to you. Otherwise, it is less likely that you will complete it. Once you have solved some goals you would like to do, start dividing them into smaller pieces. For example, if you plan to lose some weight and want to lose 10 kg in 3 months, set a goal of losing 1kg per month. At the end of the day, write your progress in your journal, and repeat this process daily. 3. Beat your daily distractions You already know that waking up early helps you avoid completing unimportant tasks. But that's not enough. You need to cut off most of your distractions. What are they? That depends. Someday it may be your co-workers and others may be your favorite TV show. The first step is to become aware of what distracts you the most. But most people's distraction is in their pockets. Your smartphone is a great tool to stay productive, but most of the time it is used for the wrong reasons. A recent study revealed that smartphone addiction leads to feeling more anxious and with lost productivity. So how can you cut distractions from your smartphone? First, recognize that your smartphone is slowing down your productivity. If you are constantly checking your smartphone throughout the day, then this is a problem. It may not seem like much, but 5 to 10 minutes of free time can equate to more than 1 hour a day. Then work your way to eliminate other distractions. Don't breathe that. Any task that prevents you from giving all your attention to an important task is a distraction. Try these tips: Go to airplane mode while working on important tasks Reconfigure your phone's notifications so that not all notifications for each app appear to you Uninstall apps you haven't used in the last 30 days Use apps that encourage productivity The most important, be patient with yourself. You're going to get in the way of the first few weeks. Because? Because you're eliminating habits you've built over the years. Becoming productive Imagine completing your most important tasks every day and feeling in control. The best part is that your smartphone apps only contribute a small part of your success. You've eliminated bad habits and adopted a more productive lifestyle. Amazing, isn't it? Now you have a list of some of the best out there to help you become productive. But don't just trust these apps. Instead, practice defining your intentions every morning. Set goals and plan your future. If you don't build your dream, someone will hire you to help build theirs - Tony A. Gaskins Jr. Make Your Mornings More More part of your day and see great things happen.
